SAO Electronic Reference Guide &
SAO WorldGroup Bulletin Board System

SAO ELECTRONIC REFERENCE GUIDE FEATURES

The reference guides infobase engine is Adobe Acrobat Reader. This Microsoft Windows or Apple Macintosh version allows you to view, print, search, and copy/paste text from one application to another. All of these infobases are created using Windows applications. Acrobat will allow you to view these documents regardless if you have the originating application or not and if you have the fonts or not. Acrobat will generate fonts on the fly if it cannot locate them. Acrobat can print a page or all pages exactly as the printed version of the document. Having reference materials online is the goal of the paperless office at the State Auditor's Office.

Downloading the current file means you will always have the latest updates and quick easy access without lugging large manuals around with you or search for one. We hope that you find these materials useful and would appreciate any and all feedback you would like to give. Address any or all comments to:

SAO Electronic Reference Guide &
SAO WorldGroup Bulletin Board System

SAO WORLDGROUP BULLETIN BOARD SYSTEM FEATURES
The SAO WorldGroup Bulletin Board System is very similar to using America Online with the same type of interface. We are able to offer a full menu of interactive services. WorldGroup matches the best of the big online services. For non-Windows users, you can still use the system with ASCII, ANSI, and RipTerm terminal programs.

With the Windows client, you could multi-task operations on the BBS. While downloading files from the file library, you could read your mail, do teleconferencing with a group of people, or anything else on the BBS. The new teleconferencing area allows users to simultaneously chat, whisper, sketch diagrams (interactive drawing board), transfer files and more in real time. Surveys and questionnaire results are immediately tallied and can be viewed as exportable bar graphs or pie charts.

Many more features available with complete programable/customizable interface for multimedia (pictures, sounds, and video). Everytime the BBS is updated or new features are added, your system will be automatically updated upon connection to the system via modem or network. Updates are downloaded in the background while you continue to work on other things. This is a true client/server communcation system. Most of the programs are on your machine allowing you to work offline and enhance the speed of the system. Try the SAO WorldGroup BBS and see for yourself.

Thank you...State Auditor's Office
